

-RTS- SETTER

Don't Get "Caught" Without One!

A very effective tool for setting springs on all body grip traps with only one hand.

- Easily removes stiff or frozen catches.
- Requires only one hand to operate
- Small light weight fits in pack or on belt.
- 15 inches long; 1 pound
- Works on all size body grip traps

Unlike the imitators, RTS setter jaws hook on spring arms, not spring holes. This eliminates extra strokes, spring damage and also allows easy removal of stiff awkward catches wedged tight in trap frame.

-RTS- SETTER

Don't Get "Caught" Without One!

RIGHT WAY

Slide safety catch hook toward spring eye. Depress thumb release. Pull on ramrod handle. Place jaws as shown. Squeeze ratchet handle. Bring Jaws together, thus compressing springs then allow gravity to swing safety catch hook in place. Hold other hand with down pressure on end of ramrod, give handle a slight squeeze then push thumb release.

RIGHT WAY

Wrong Way

Wrong Way

-Jaws not equal distance from spring eyes.
-Safety catch hook on wrong side of RTS Setter.

The most dangerous maneuver in the handling of large body grip traps is when you squeeze the two jaws together to set the dog into the trigger.

This can be done safely by reaching through the inside of the jaws with the setter, draw the jaws together, attach your safety gripper, press thumb to release and remove the setter.

Note: Giving the handle a slight squeeze before pushing thumb release makes it easier to depress and reduces wear. Keep RTS Setter mechanism clean and free of dirt and oil.

CAUTION!

When you press the thumb operated release, the ramrod handle will fly up quickly – Hold palm of the other hand with down pressure.

- KEEP HEAD AND HAND CLEAR OF ANY TRAP SETTER WHEN COMPRESSING SPRINGS.

LUBRICATION

For good performance lubricate where shown before first use and after every 10 uses.

FREE PLAY ADJUSTMENT

Loosen the screw slightly when the trigger has too much free play.

ATTENTION!!!

If recoil is difficult to release, this is due to a build up of pressure. To safely release pressure, squeeze the trigger while pressing recoil.
