

Gentrol®

IGR CONCENTRATE
with GENCOR® Insect Growth Regulator

Supplemental Labeling

For use to control drain flies and fruit flies

EPA Reg. No. 2724-351

Directions for Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Important

Before using this product, read and carefully observe all applicable directions, restrictions, and Precautionary Statements on the Zoëcon® GENTROL® IGR Concentrate (GENTROL) EPA-registered label.

General Information

GENCOR®, an Insect Growth Regulator (IGR), is a synthetic juvenile hormone "look-alike" which disrupts the normal growth development of drain and fruit flies. GENCOR disrupts the normal life cycle of drain and fruit flies, killing these insects, thus, the cycle of an infestation ends. GENTROL IGR Concentrate is intended for use in apartment buildings, bakeries, bottling facilities, breweries, boiler rooms, cafeterias, candy plants, grocery stores, day care centers, hospitals, residential homes, office buildings, kitchens, laboratories, cereal processing facilities, manufacturing plants, mausoleums, meat and produce canneries, nursing homes, restaurants, schools, locker rooms, stores, taverns, warehouses, as well as various modes of transportation such as aircraft, buses, trucks, trailers, rail cars, and marine vessels.

Registrant:

Food Handling Establishment Applications

GENTROL may be applied as a general surface, fogging, spot, or crack and crevice treatment in both food and non-food areas of food handling establishments. These establishments are defined as places other than private residences where exposed food is held, prepared, processed, or served. It also includes areas where food items are received, prepared, packaged, and stored, as well as enclosed food processing systems (mills, dairies, etc.).

For control of drain flies, fruit flies: Apply GENTROL to areas of fly breeding. For drains, apply product into and around the downspout and catch basin area. Coat these areas thoroughly as fly larva develop in the scum buildup on the sides of drain pipes. Repeat applications at 2 to 4 week intervals depending upon the severity of infestation.

This labeling must be in the possession of the user at the time of pesticide application.
