VOLE DAMAGE

Where to apply Whole Control: May be applied to lawns, gardens, nurseries, golf courses, park areas, athletic fields and cemeteries.

Product Description: Promotes and restores lawn and garden areas by inhibiting the formation of burrows, tunnels, ridges and holes that are caused by moles, armadillos, voles, pocket gophers and other ground tunneling insectivores. This product is not destroyed by rain and may remain effective for up to three months when applied as directed. According to soil type, it may take up to three weeks for the product to reach maximum effectiveness.

Storage and use directions: For application mix one quart of Whole Control with 10 ounces of dish washing detergent (with a high grease cutting action) example: Joy. Add 5 gallons of water. This quantity will cover a 10,000 square foot area when sprayed evenly for moles and voles. For armadillos, this 5-gallon quantity will effectively treat 3000 square feet. Immediately following the application, irrigate with a sprinkler or hose until the soil is saturated and water begins to stand on the surface.

For areas of high infestation we suggest using a grubicide prior to the application of Whole Control. This greatly increases the onset and degree of effectiveness for repelling action.

When to apply Whole Control: Apply when the signs of digging, tunneling and burrowing by animals first appear. For year round control, apply spring, summer and fall.

DO NOT APPLY DIRECTLY TO LAKES, PONDS, STREAMS OR OTHER STANDING WATER.

Storage: Store only in original container in a cool, dry place inaccessible to children and pets.

Disposal: Do not reuse empty container. Rinse thoroughly. Securely wrap in newspaper and discard in trash.

Notice: the buyer assumes all responsibilities for safety and use not in accordance with directions.
